

Region Performance Analysis

Files

- `region_performance_analysis.xlsx` — completed Excel workbook.
- `README.md` — this usage guide.

What was completed

This workbook implements the task shown in the screenshot:

- **Description:** Compare sales across regions.
- **Objective:** Practice grouping and comparison.
- **Tools:** Excel-style workbook with formulas, filters, conditional formatting, and a bar chart.
- **Deliverables:** Region summary and bar chart.
- **Hints applied:** Compare both sales and profit; rank regions.
- **Suggested dataset:** Superstore-style practice data.

Workbook sheets

1. **Dashboard** — headline KPIs and a clustered column chart comparing sales and profit by region.
2. **Region Summary** — formula-driven totals, profit margin, sales rank, profit rank, order count, and performance notes.
3. **Data** — editable source records with an Excel table and filters.
4. **Guide** — task context, formula logic, and update instructions.

How to use

1. Open `region_performance_analysis.xlsx` in Excel, LibreOffice Calc, or WPS Office.
2. Go to the **Data** sheet and filter or replace the practice records as needed.
3. Review **Region Summary** for regional rankings and margin comparison.
4. Review **Dashboard** for the bar chart and key totals.
5. If your spreadsheet application asks to recalculate formulas, choose **Yes** or press `Ctrl+Alt+F9` in Excel.

Important note about the data

The screenshot identifies **Superstore** as the suggested dataset but does not include a source data file. To make the deliverable usable immediately, the workbook contains a clearly labeled, compact Superstore-style practice dataset. Replace the rows on the **Data** sheet with the official Superstore data if your instructor provided it separately; keep the same column structure for the existing formulas to work.

Formula logic

- **Total Sales:** SUMIF by region
- **Total Profit:** SUMIF by region
- **Profit Margin:** Total Profit / Total Sales , protected with IFERROR
- **Sales Rank / Profit Rank:** RANK (compatible with Excel, LibreOffice Calc, and WPS Office)
- **Order Count:** COUNTIF
- **Chart:** linked to the summary values through the Dashboard chart source table

Quality checks completed

- No formula error placeholders were intentionally included.
- Currency and percentage formats are applied.
- Filters and freeze panes are enabled on the source and summary sheets.
- Column widths, print orientation, and a professional color theme are set.
